Micro-CT Samples:

CASTED SAMPLE

3.FEB.2020

- Pit: "Mesa Lodge Cabin 1" (117-0 cm; 7 sample containers)

4.FEB.2020

- Pit: 3s33 (104-0 cm; 7 sample containers)
- Pit: 6s34 (75-0 cm; 5 sample containers)

5.FEB.2020

- Pit: 8c18 (100-0 cm; 6 sample containers)
- Pit: 8c11 (90-0 cm; 5 sample containers)

6.FEB.2020

- Pit: 5n15 (113-0 cm; 5 sample containers)

SNOW SAMPLE

5.FEB.2020

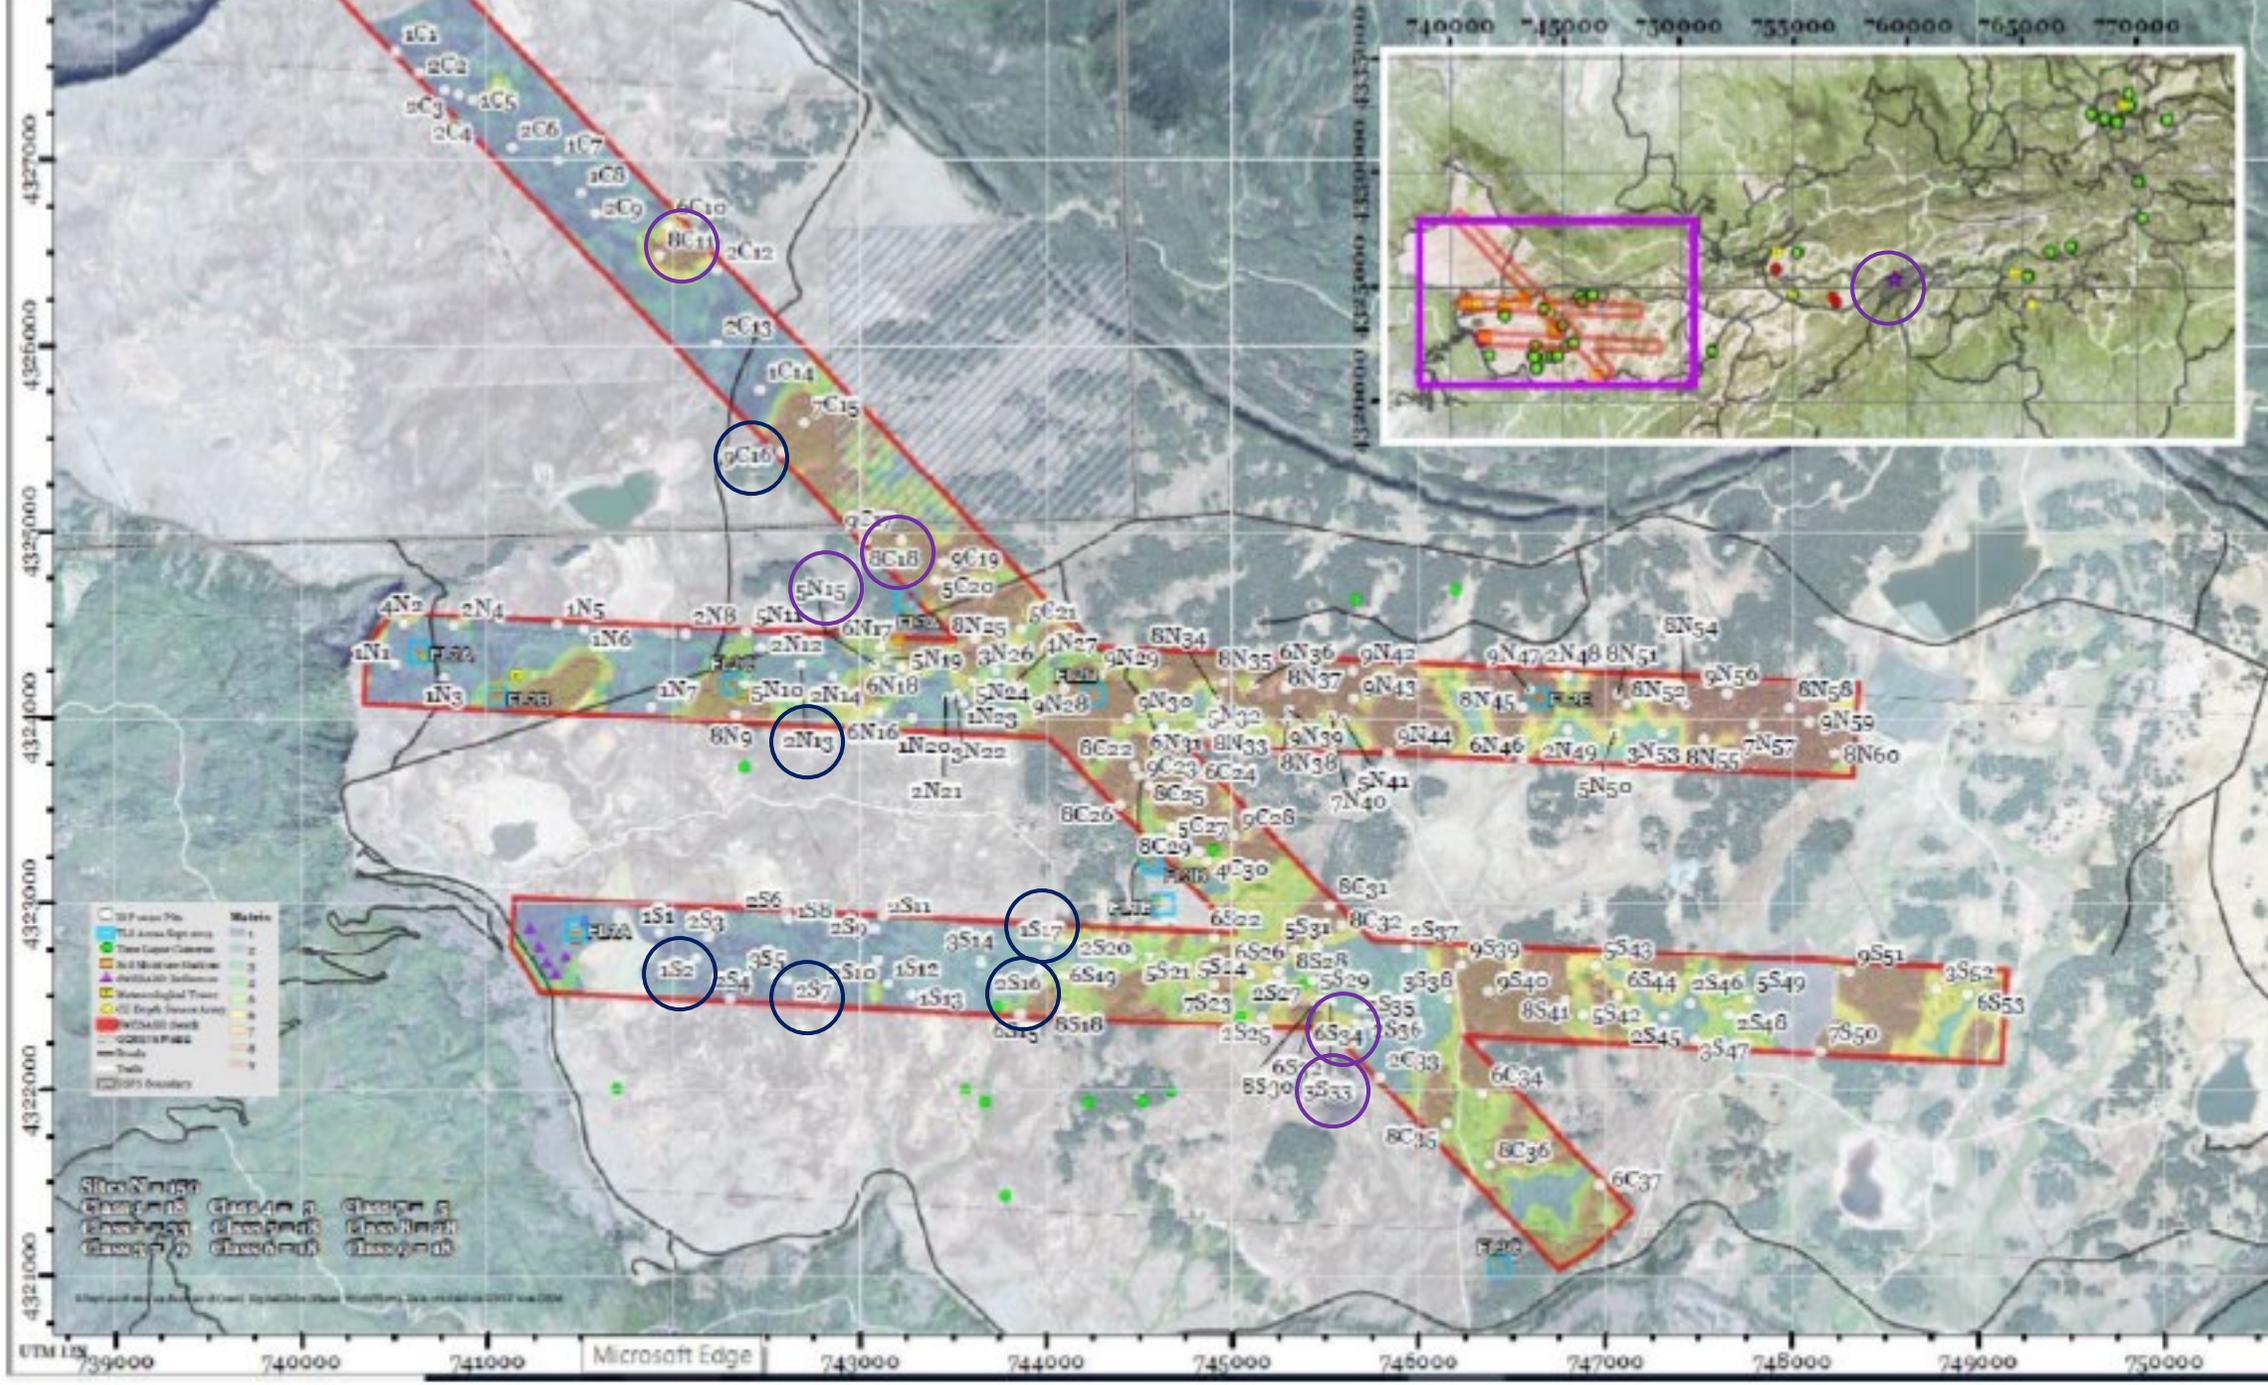

- Pit: 9c16 (110-0 cm; 7 sample containers)

6.FEB.2020

- Pit: 2n13 (139-0 cm; 8 sample containers)

8.FEB.2020

- Pit: 1s2 (85-0 cm; 6 sample containers)
- Pit: 2s7 (80-0 cm; 5 sample containers)
- Pit: 2s16 (94-0 cm; 6 sample containers)
- Pit: 1s17 (95-0 cm; 6 sample containers)

- Pit: 2s16 (94-0 cm; 6 sample containers)*
- Pit: 1s17 (95-0 cm; 6 sample containers)*

NOT SCANNED

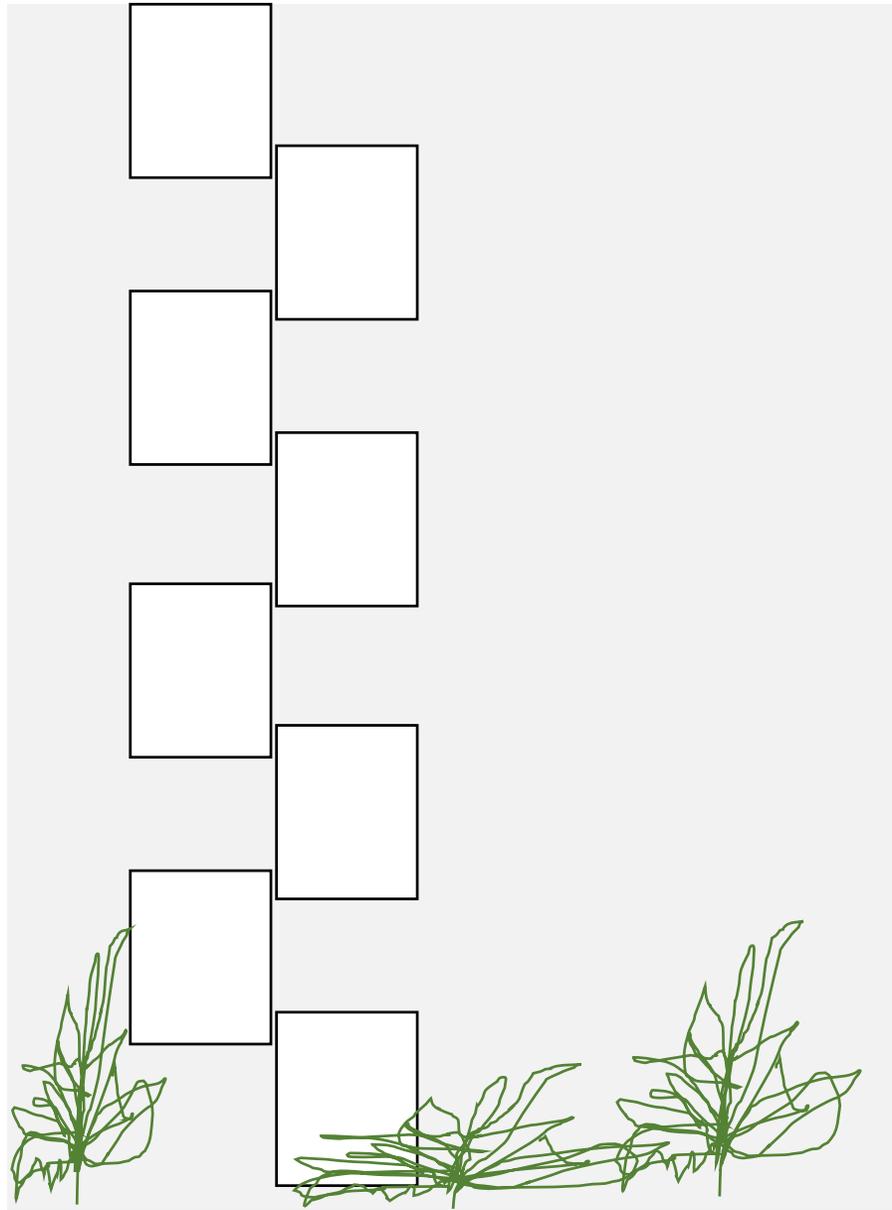

SCANNED

* ANALYZED

Methods

- Collect samples at pit
- Cast samples in DMP/DEP and prepare for transport (lots of dry ice)
- Sub-sample in cold room (14F)
 - cut ~6 cm sample from Tupperware sample container for dime container
- Scan ~6 cm in dime container in micro-CT (3x/sample container; 3 scans/dime container)
 - Scan is 20 um “medium” resolution (17 minutes)
 - 0.6 step rotation
 - 330 ms exposure
 - 40 kV voltage
 - 200 uA current
 - No filter
- Reconstruct scan (~1500 + 2D images of scan into stack; corrections)
- Analyze ~1500+ slices (make VOI- trim edges and ROI- 11 mm, binarization- peak midpoint) 2D and 3D data
- 3D Visualization
- Use S/V ratio to calculate SSA

- Analyze ~1500+ slices (make VOI- trim edges and ROI- 11 mm, binarization- peak midpoint) 2D and 3D data
- 3D Visualization
- Use S/V ratio to calculate SSA

Methods

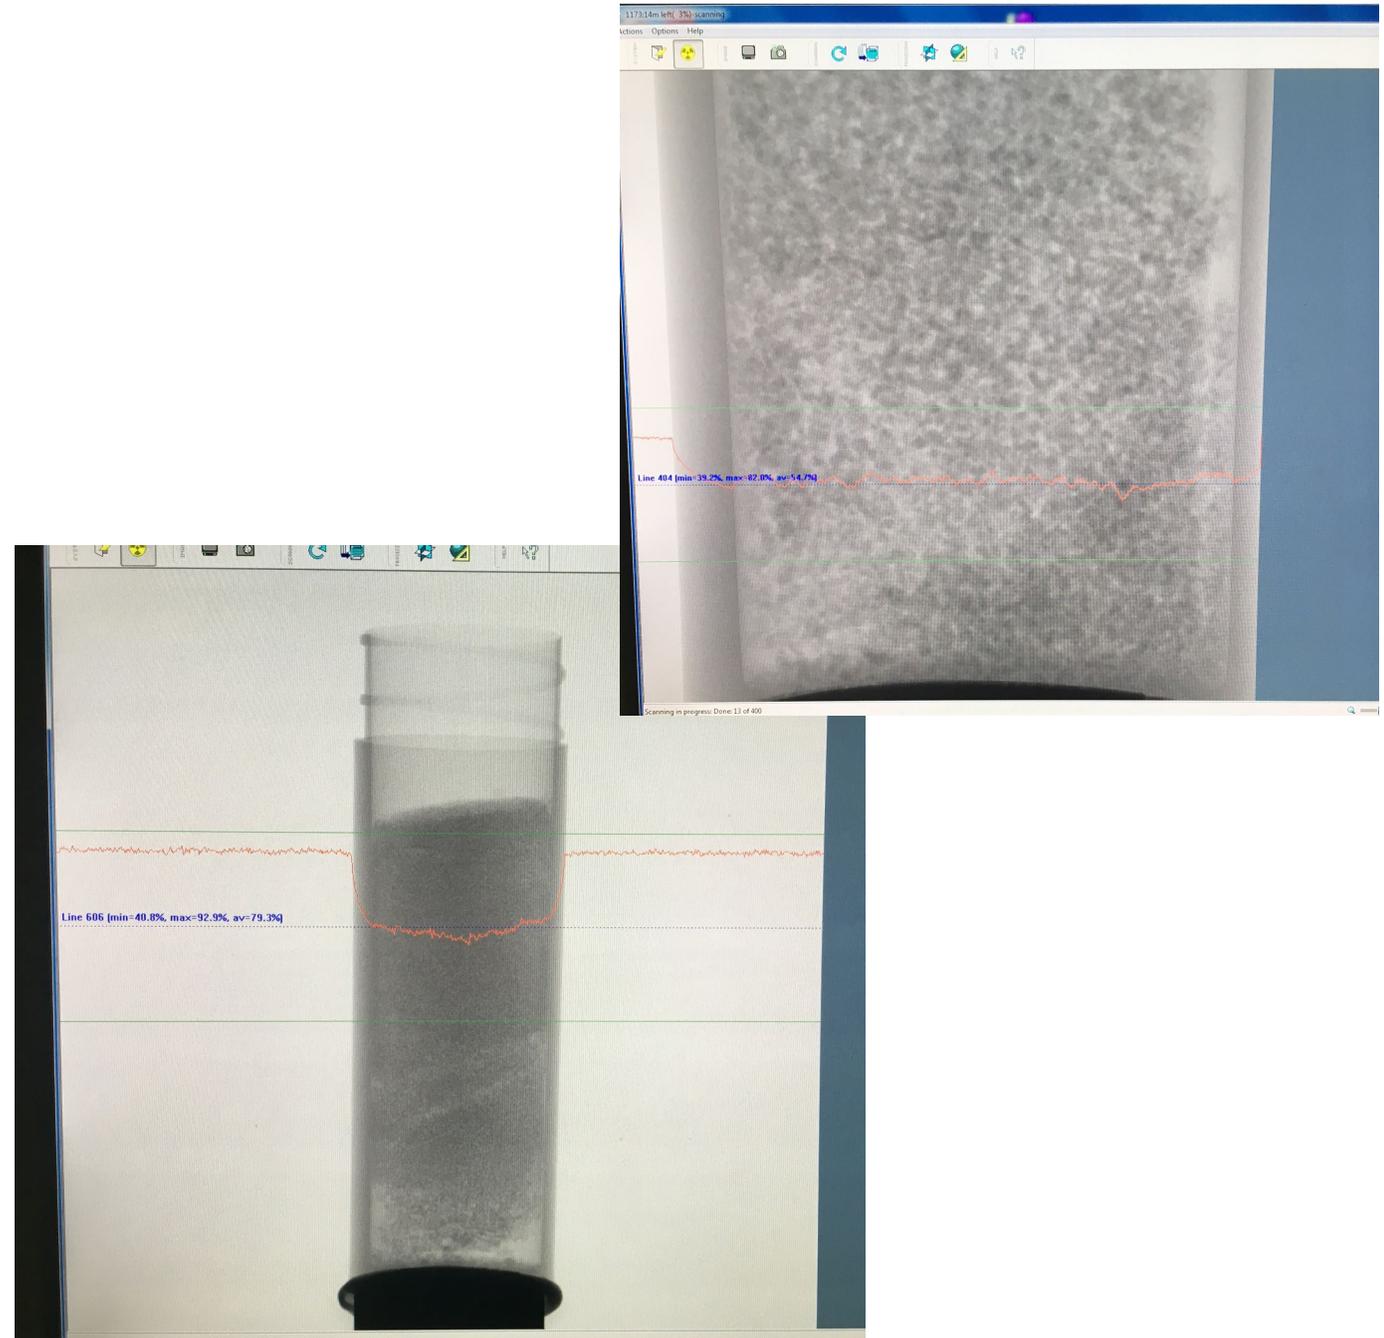

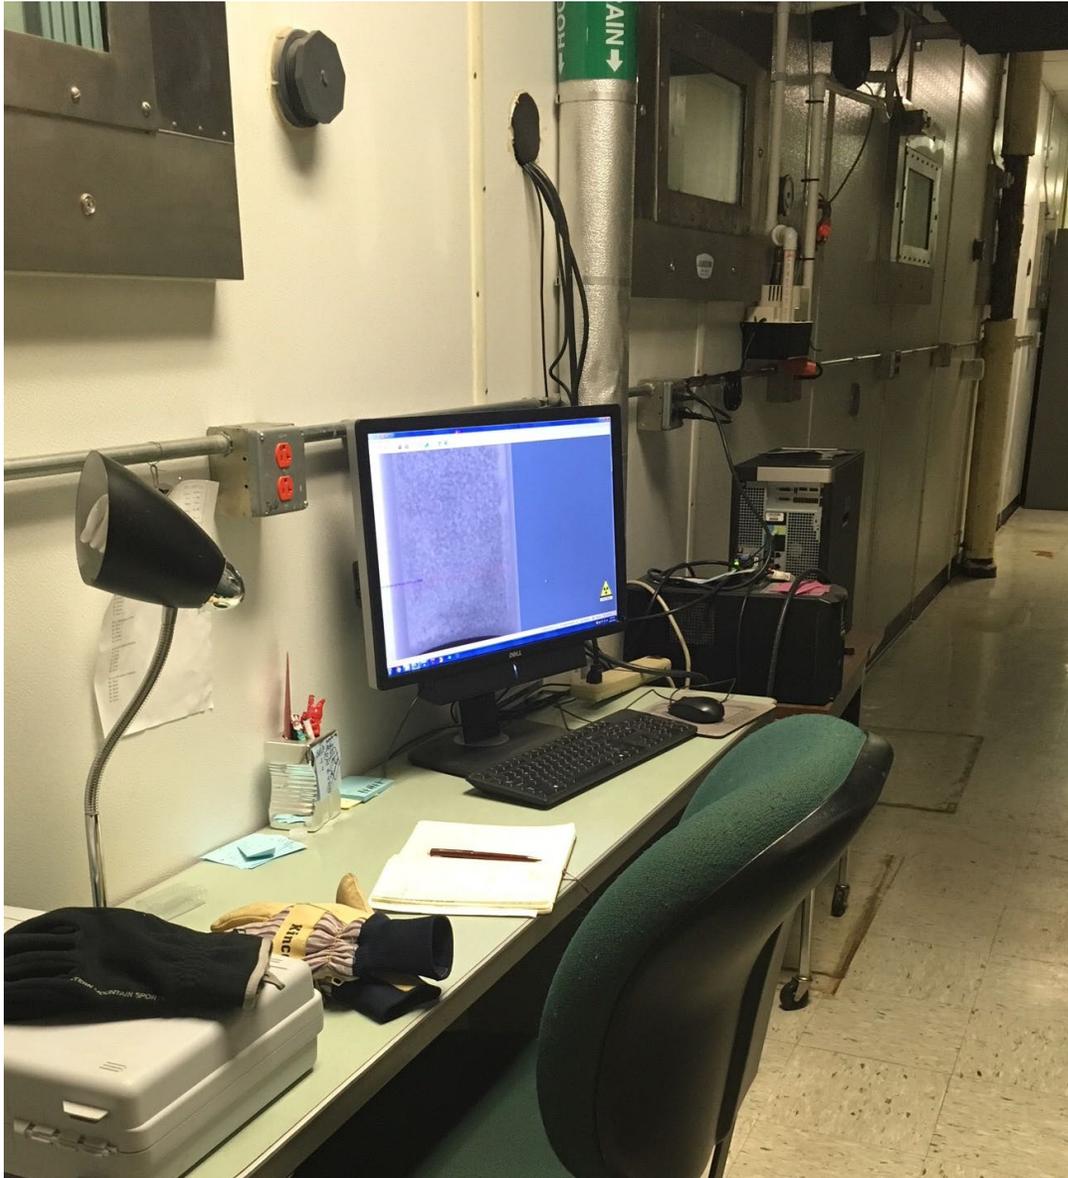

- Collect samples at pit
- Cast samples in DMP/DEP and prepare for transport (lots of dry ice)
- **Sub-sample in cold room (14F)**
 - cut ~6 cm sample from Tupperware sample container for dime container
- Scan ~6 cm in dime container in micro-CT (3x/sample container; 3 scans/dime container)
 - Scan is 20 μm “medium” resolution (17 minutes)
 - 0.6 step rotation
 - 330 ms exposure
 - 40 kV voltage
 - 200 μA current
 - No filter
- Reconstruct scan (~1500 + 2D images of scan into stack; corrections)
- Analyze ~1500+ slices (make VOI- trim edges and ROI- 11 mm, binarization- peak midpoint) 2D and 3D data
- 3D Visualization
- Use S/V ratio to calculate SSA

Methods

- Collect samples at pit
- Cast samples in DMP/DEP and prepare for transport (lots of dry ice)

CTAn

CTAn

The image displays two side-by-side screenshots of the CTAn software interface. The left window shows a grayscale image of a porous material with a red box indicating a region of interest at $x = 11.919$ and $y = 19.576$ mm. A list of regions of interest is shown on the right, with the 110th line selected. The right window shows a binary selection of the same region, with a histogram and a table of grayscale indices.

Regions of Interest List (Left Window):

File name	Z-position

- Analyze ~1500+ slices (make VOI- trim edges and ROI- 11 mm, binarization- peak midpoint) 2D and 3D data
- 3D Visualization
- Use S/V ratio to calculate SSA

Micro-CT statistics

- 2D (per cross sectional slice) or 3D data (per the total volume of the sample)
 - Total porosity
 - closed porosity
 - open porosity
 - surface to volume ratio (S/V: which we can convert to SSA)
 - mean grain size per sample volume,
 - mean grain size over the height of the sample (per 2D cross section)
 - anisotropy
