Notice: This data set was first published on the [1998 CAPS CD](#).

The text for this document was taken unchanged from that CD.

1 DATA DESCRIPTION

Mountain permafrost temperatures measured in 23 boreholes ranging in altitude from 1100 to 2280 meters are reported in three tables presented on the CAPS CD-ROM version 1.0, June 1998.

Tables include site number, latitude, longitude, [grounds, in depth], and site description, including soil type. For 7 boreholes, tables of changes in temperature, depth of permafrost bottom, and temperature gradient over a 10-year period are included.

1.1 overage of data set

1.1.1 Study location:

Burenkhaan, Terkh; Erdenet, Baganuur; Mongolia

1.1.2 Geographic extent - Describe the corners of the box representing the extent of data coverage:

Northwestern latitude: 51.06 N

Northwestern longitude: 98.24 E

Southeastern latitude: 45.217 N

Southeastern longitude: 108.29 E

1.1.3 Period of Investigation - Years covered, with months if appropriate:

1970-1996

1.2 Current storage of data

Paper: X?

Data center (Please give name of center):

Are your data at risk of being lost? Y?
